## **Quantum Biophysical Semeiotics demonstrates Simultaneous and Synchronous Energy-Information Wave Transmission from Consciousness to Consciousness by Thought**

*Sergio Stagnaro\**

### **Introduction.**

In a previous article, I have demonstrated the Water-Memory-Information by means of Music Energizing Action: Caramel's Experiment <sup>\*\*</sup>(1).

Masaru Emoto claims that human consciousness has an effect on the molecular structure of water. Emoto's hypothesis has evolved over the years of his research. Initially, Emoto claimed that high-quality water forms beautiful and intricate crystals, while low-quality water has difficulty forming crystals.

According to Emoto, an ice crystal of distilled water exhibits a basic hexagonal structure with no intricate branching, and positive changes to water crystals can be achieved through prayer, music or by attaching written words to a container of water.

Since 1999 Emoto has published several volumes of a work titled *Messages from Water*, which contains photographs of water crystals next to essays and "words of intent." Through the 1990s, Masaru Emoto performed a series of experiments observing the physical effect of words, prayers, music and environment on the crystalline structure of water. Emoto hired photographers to take pictures of water after being exposed to the different variables and subsequently frozen so that they would form crystalline structures.

Recently, Quantum Biophysical Semeiotics experiments offer new evidences about the existence of a Water-Memory-Information, and following the interesting hypothesis of Emoto about the changes to water crystals achieved by music and songs (1).

In this article, I present an interesting, I dare to say epochal, experiment, which corroborates the hypothesis of water memory-information, water energized by music and song, the transmission of water memory-information, but especially the simultaneous and synchronous Energy-Information Wave Transmission from Consciousness to Consciousness by Thought, even by song energized Water (1-6). Moreover, such a experimental evidence plays a central role in demonstrating that both Psychokinetic Diagnostics and Quantum Therapy are scientifically based.

### **Methods and Materials.**

In a large number of earlier articles and book, I have illustrated in details Quantum Biophysical Semeiotic Methods, utilized in this experiment (7-22).

The assessment of the microcirculation at the level of limbic cortex, prefrontal cortex, amigdalas, supra-ventricular nucleus, epyphisy, occurred at basal line and during the experiment (See [www.semeioticabiofisica.it](http://www.semeioticabiofisica.it)) (13, 23-28).

In the clinical experiment, I have enrolled 12 healthy individuals, mean age 54 years, of both sexes. The subjects who have emitted energy-information waves by simulated singing and the subjects who have unconsciously received them were away each other from 6 meter to a large number of kilometres, i.e., from Pavia, Italy, to New York (USA) and Adelaide (Australia).

## Lullaby's QBS Experiment

The person, in charge to sing a lullaby, exclusively by thought, immediately when doctor says, e.g., "YES", and has to interrupt the lullaby when doctor say "NO", is sitting down in a room near that where the second subject is staying under examination.

Doctor must perform at first, the basal evaluation of microcirculation of brain limbic centres, as well as that of both epyphysis and SST-RH, i.e., the neuronal centre of somatostatin releasing hormone, continuing the assessment during experiment.

Notoriously, listening to music and song ameliorates humour level.

In fact, under this situation, physicians observe microcirculatory activation of humour anatomical neuronal centres, for instance, in pre-frontal and limbic cortex, amygdales, supra-chyasmatic nucleus and epyphysis, corroborated by QBS (1, 25-28).

At rest, in the first evaluation, I assessed *basal* microcirculation behaviour in above-mentioned neuronal centres, and epyphysis: AL+PL+DL = 6 sec. duration (1, 25-28).

Soon thereafter, when the second person, localized in the near room, was told to sing by thought the lullaby at the signal YES, directing it "precisely" to the examined individual, I observed simultaneously in the examined person type I, associated, physiological, *maximal* microcirculatory activation of pre-frontal and limbic cortex, amygdales, supra-chyasmatic nucleus and epyphysis : AL PL DL = **11 sec.** (NN = 6 sec.), the maximal value.

At this point, I located a glass containing *pure* water, near the mouth of the singing person, who directed her (his) lullaby "precisely" to that subject I was examining: such a energized water brought about the identical results, described above!

In fact, in spite of the distance, when the glass containing energized water was away from the examined person, his (her) AL+PL+DL of the above-mentioned brain neuronal centres showed, once again, the maximal values: their duration was 11 seconds.

Interestingly, lullaby's experiment resulted successful even when the two person were away each from the other an awful number of kilometres, as above referred.

## Conclusions

In conclusion, lullaby QBS experiment corroborates, in a refined manner, the hypothesis of water memory-information, water energized by song, the transmission of water memory-information, but especially emphasises the simultaneous and synchronous Energy-Information Wave Transmission from Consciousness to Consciousness by Thought, even by song energized Water (1-6).

Moreover, such a experimental evidence plays a central role in demonstrating that both Psychokinetic Diagnostic and Quantum Therapy have scientific bases.
