

Terziani's Maneuvre in early recognizing cancer from its first stage, Inherited Real Risk.

by

Sergio Stagnaro, Simone Caramel, Marco Marchionni

Terziani's Maneuvre has solved clinically the problem of oncology for excellence: the early diagnosis of cancer, starting from cancer Inherited Real Risk, effective tool to fight cancer (1). Due to no-local realm in biological systems (2), in the health, intense digital pressure upon a pulp finger cannot bring about immediately (after 3 sec.) Gastric Aspecific Reflex (= in the stomach both fundus and body dilate, while antral-pyloric region contracts), that appears only after 20 sec.

On the contrary, in individual involved by cancer inherited Real Risk, the reflex happens after 3 sec. exactly, showing an intensity of 0,5 cm. Such a intensity is higher in case of overt cancer in direct relation to the cancer seriousness. (Fig 1 and 2)

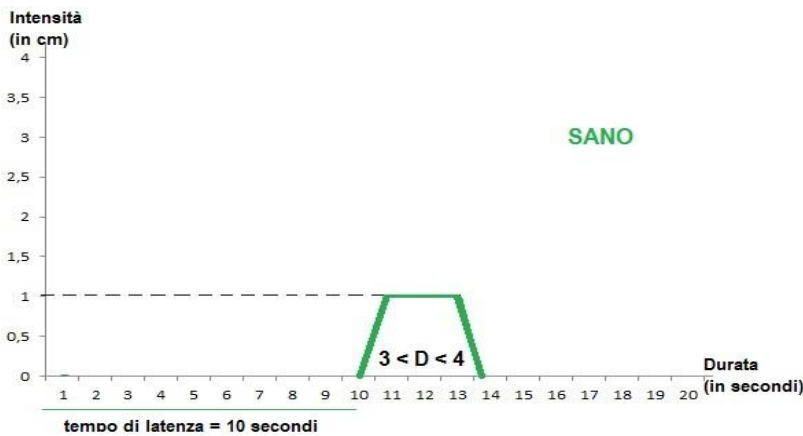

Fig. 1

Immediately after having recognized the positive Terziani's Maneuvre , the doctor can easily locate the exact site of the cancer by the many signs of Quantum Biophysical Semeiotics (3-5).
